

Renaissance

Ireland's Premier IT security value added distributor

At Renaissance our focus is to help you develop your business profitably through security and compliance. Renaissance delivers data security solutions for Irish businesses, giving the protection and assurances needed to keep their IT environment safe and secure.

Renaissance provides your business with:

- Marketing
- Pre-Sales support
- Post-Sales support
- Technical support
- Price and product
- Sales training
- Technical training.

Renaissance offers professional services based around data security and compliance.

- Data security review & policy development
- Endpoint, UTM, Health checks
- Trustwave Secure Web and Email Gateway Health Checks
- Online support services and security consultation
- Implementation Services
- Upgrade Services
- Training & Accreditation

Renaissance will:

- Develop new sales opportunities
- Maximise returns on your existing customer base
- Cross sell and upsell to your customers

Our account managers are here:

- To develop your business
- To identify opportunities
- To make you money

Renaissance Mid-Market and SMB Product suite

USERS

- Endpoint Protection & Authentication Compliance
- Personal & Enterprise Grade Security
- Synchronised Security
- Protecting Against Unauthorised Access
- Vulnerability Management

INFRASTRUCTURE

- Data Backup
- Encryption
- Archiving
- Data Classification
- Workspace management

NETWORK

- Gateway Protection
- Network Analysis & Security
- Actionable Visibility
- Secure WIFI

YOUR BUSINESS

- Backup & Data Recovery
- Backup Solutions
- Data Leakage
- Vulnerability Management
- Ransomware Protection

Renaissance

Enterprise Suite

Ericom provides secure remote access, desktop virtualisation (VDI) and web security solutions to organisations across all industries. With a focus on application delivery, cloud enablement and secure browsing Ericom advances secure connectivity – providing end users with a superior work experience and optimising enterprise productivity.

Ericom provides business value by empowering timely and secure access such as applications, desktops, data and cloud-based information while ensuring that the user experience remains natural and smooth, regardless of the conditions, device and location. Ericom Solutions cost-effectively optimise IT efficiencies and access infrastructures, extend the life of IT assets, and increase business efficiencies.

Indegy provides situational awareness and real-time security for industrial control networks to ensure operational continuity and reliability. The Indegy platform delivers comprehensive visibility and oversight into all OT activities, including changes to controller logic, configuration and state, across all vendor devices, by utilising control network inspection of proprietary control communications, and patent-pending agentless controller verification technology that validate PLC firmware, code and configuration. With a team made up of veteran cyber security and ICS experts, Indegy provides visibility, protection and operational continuity for your operational environment.

observe **it**

ObserveIT provide detection and prevention to enable proactive defence against both malicious and negligent user behaviour from employees, privileged users, and third parties.

With ObserveIT, organisations can significantly reduce the risk of security incidents by monitoring user behaviour and offering real-time education and deterrence. ObserveIT cuts investigation time from days to minutes and offers full playback of security incidents to improve response times and simplify compliance.

CensorNet provides a multi-channel, multi-layered approach to securing the cloud via its purpose-built platform. CensorNet delivers integrated web security, email security, cloud application security and multi-factor authentication to provide security focused **visibility and control of an organisation's assets**.

Their elastic security platform combines traditional security controls (e.g. web/URL filtering, email security) with granular cloud application control and adaptive multi-factor authentication to allow access while controlling outcomes. They were the first to market with a secure web gateway with in-built cloud application security to bridge the gap between traditional web security and cloud application security.

PhishLine is a complete, risk-based Social Engineering Management Platform that will help your Information Security Team go beyond security awareness by establishing metrics through real-world social engineering and phishing simulations. PhishLine provides actionable discoveries at the human layer that are specific to your culture and organisation. Finding your PhishLine is the gateway to taking informed, decisive action against these persistent threats.

The Inventors of Tokenless® Authentication

SecurEnvoy is the trusted global leader of tokenless® two-factor authentication. As the pioneers of mobile phone based tokenless® authentication; SecurEnvoy lead the way with ground breaking solutions that others aspire too.

Their innovative approach to the tokenless® market now sees thousands of users benefitting from their solutions all over the world. No remote software deployment and administrators enjoy the management tools allowing them to rapidly deploy up to 100,000 users per.

Veracode provides an automated cloud-based service for securing web, mobile and third-party enterprise applications. The company provides multiple security analysis technologies on a single platform, including static analysis, dynamic analysis, mobile application behavioural analysis and software composition analysis.

Veracode's unified platform assesses and improves the security of applications from inception through production so that businesses can confidently innovate with the web and mobile applications they build, buy and assemble as well as the components they integrate into their environments. With Veracode's scalable cloud-based service and programmatic approach, you can secure your entire global application infrastructure — and continuously innovate without sacrificing security along the way.

Appixoft delivers the workspace solution 'Scense' to companies, educational institutions, healthcare institutions and government institutions at home and abroad. By disconnecting the personal workspace and applications from the operating system, Scense changes complex distributed desktop environments into one efficient, manageable and transparent infrastructure. The Scense Platform transforms every PC or laptop into a personal and customised workplace with universal access.

In doing so, Scense addresses all IT management challenges related to virtual and physical desktops and laptops, application virtualisation and windows migration. Dynamic applications in every personalised workplace on which device and at each location.

TERAMIND

Teramind provides a user-centric security approach to monitor employee behaviour. Our software streamlines employee data collection in order to identify suspicious activity, detect possible threats, monitor employee efficiency, and ensure industry compliance. We help reduce security incidents by providing real-time access to user activities by offering alerts, warnings, redirects and user lock-outs to keep your business running as efficiently and secure as possible.

8MAN

8MAN is a leading Access Rights Management (ARM) solution in Microsoft and virtual server environments protecting companies against unauthorised access to sensitive data. It redefines standards for professional network security and efficient user management and combines advanced functionalities with meeting current security and compliance regulations.

8MAN is a unique access rights management solution that brings a new level of comfort in handling complex tasks related to user-provisioning, tracking and monitoring – helping businesses establish a robust security framework to successfully minimise exposure to insider threats. They provide: Permission Analysis, Security Monitoring, Documentation & Reporting, Role & Process Optimisation and User Provisioning.

Access Rights Management with 8MAN.

- PERMISSION ANALYSIS
- SECURITY MONITORING
- USER PROVISIONING
- DOCUMENTATION & REPORTING
- ROLE & PROCESS OPTIMIZATION

DFLabs is the pioneer in Security Automation & Orchestration technology, leveraging your existing security products to dramatically reduce the response and remediation gap caused by limited resources and the increasing volume of threats and incidents. DFLabs is technology able to manage and reduce the overwhelming security complexity of your technology infrastructure.

Our offerings comprise our Patent Pending Technology and our world-class Professional Service Practice, including:

- Secure Collaborative Platform for Data Sharing and Reporting.
- Threat Intelligence
- Bi-Directional integration with over 100 leading third-party security technologies.
- Forensic and Response System Analysis and Evidence Management.
- Dynamic Knowledge Base for GDPR, ISO, NIST and Compliance with many regulatory frameworks worldwide.
- Incident Response Professional Service

SOPHOS

Sophos is a leading developer of integrated centrally deployed and managed security solutions.

IT security is becoming more and more complex, with new challenges like smartphones and tablets as well as cloud storage, an ever-increasing array of security products to manage and new apps to monitor, and ever more devious malware and hackers. Unfortunately, IT teams and IT security budgets are not growing at the same rate—something has to give.

Network protection

Sophos UTM helps you consolidate your security without compromising its effectiveness. It is security made simple, protecting your users everywhere while making security easier to deploy and manage.

End User protection

Sophos endpoint protection will keep data in and malware out—all within your antivirus budget. And we protect your mobile devices and servers.

Server Protection

Sophos protection delivers more effective, faster protection across your network of physical or virtual servers.

ALTARO

Altaro VM Backup is a hassle-free Virtual Machine backup software solution for Hyper-V and VMware. The intuitive interface allows you to set up and perform backups and restores easily. Altaro VM Backup is designed to give you the power you need, without the hassle and steep learning curve.

- Easy to use, intuitive UI - making it easy to implement a solid backup strategy
- Managing and configuring backup/restore jobs across multiple hosts has never been simpler
- Full control & scalability – Monitor and manage all your Hyper-V and VMware hosts from a single console

CA Technologies creates software that fuels transformation for companies and enables them to seize the opportunities of the application economy. CA offers Enterprise IT Management (EITM) software for organisations to manage IT in computing environments, which contain people, information, processes, systems, networks, and applications, as well as databases from a Web service to the mainframe to a virtualised cloud, regardless of the hardware or software customers they are using.

The company licenses its products principally to IT service providers, financial services companies, governmental agencies, retailers, manufacturers, educational institutions, and healthcare institutions worldwide through direct sales force, as well as indirectly through systems integrators, managed service providers, technology partners, EITM value-added resellers, original equipment manufacturers, and distribution and volume partners.

The Netshield appliances offer simplified and affordable NAC (Network Access Control) devices for small and mid-sized organisations or networks serving from 25 to 4,000 assets. Netshield's patented and highly scalable solutions allow you to control network access and detect, alert, and block accidental, unintended, malicious access and data exfiltration. The Netshield products are hardware and software agnostic, which can be plugged in anywhere and discover assets everywhere.

BitDefender develops and provides online security software solutions for businesses and consumers. It offers antivirus, antimalware with proactive heuristic detection, firewall, and device control solutions. BitDefender offers business security solutions enterprises, businesses, virtualised environments, endpoints, service providers, exchanges, mobiles, service providers, and Amazon Web services; compare, renewal, and upgrade solutions; and cloud security for MSP.

It also provides security for home users, including Windows, mobile, packs, privacy, Mac, tech assist, toolbox, and home users support. Bitdefender delivers robust security you can rely on. Bitdefender also delivers full disk encryption and granular patching.

Cloud24x7

Cloud 24x7 solution is focused cloud solution provider company with strong intent to build the specialised set of skills and practice in cloud technology to deliver solutions to Enterprises, Start-ups, and **consumer solutions**. **Cloud24x7's Security FIRST, Threat Intelligence Platform** offers unparalleled visibility into the global threat landscape, advanced analytics, and insights, delivers actionable, intelligence-driven security solutions to the clients.

Cloud 24x7 solutions enable organisations to define their cyber defences to prevent security breaches, detect malicious activity in real time, prioritise and respond rapidly to security breaches and predict emerging threats.

Entrust Datacard Corporation offers identity and secure transaction technologies for financial, government, corporate, education, healthcare, retail, and transit industries worldwide. It offers financial cards, passports, and ID cards; and digital realm of authentication, certificates, and secure communications.

The company provides instant card issuance, transaction security, mobile authentication, high-volume card issuance, border control, e-government, citizen ID program, credential lifecycle management, authentication, identity credential management, SSL certificates, and employee ID solutions.

ClearCrypt

The growing amount of data stored on external drives to cater for the need to store and transfer files and large amounts of data means that storing this securely is no longer an option but is now mandatory.

ClearCrypt is a range of 256-bit encrypted Storage devices designed to be robust, secure and cost effective.

- Full Capacity Range
- Real-time AES256bit encryption
- Software free
- Aluminium Casing
- True Hardware Encryption
- Super Speed USB3.0
- On-board keypad

USB3.0 super speed with a transfer rate up to 5.0Gpbs, 10x faster than traditional USB 2.0 drives.

Privileged, confidential or sensitive data must be protected at all times from intentional or accidental loss and the ClearCrypt range of devices is designed to make this cost effective, flexible and easy to achieve. ClearCrypt offers industry leading encryption and a product range to suit all needs and requirements.

SecurityDAM is a leading provider of best-in-class cloud-based security solutions, helping MSSPs, service providers and enterprises offer and gain the highest possible level of security. The CyberDAM robust solutions suite, secures many of the most complex network globally, addressing cyber security challenges such as Distributed Denial of Service (DDoS) attacks and network/application Vulnerability Assessment. Using our multi-tenant management platform, global network of scrubbing centres and SOC services

ENDPOINT PROTECTOR

by CoSoSys

CoSoSys is specialised in Data Loss Prevention, eDiscovery and Device Control. The application portfolio includes functions from device control, scanning data at rest, USB enforced encryption, mobile device security, file tracing and shadowing, password security, data synchronisation and network security.

Content Aware DLP: Ensures data transfers through various exit points such as e-mails or cloud solutions do not contain confidential information. This is done by content filtering, whitelists and blacklists, file tracing and shadowing and reports analysis.

Device Control: Provides granular control of removable device access rights on Windows, Mac OS X and Linux endpoints.

eDiscovery: Get visibility into sensitive data at rest and apply remediation actions to prevent unauthorized access and data leakages.

Mobile Device Management: Ensures complete protection and control of the mobile device fleet while increasing productivity and flexibility. This is done by strong security, geofencing, tracking and locating and mobile application management.

PixAlert has been protecting enterprise networks and safeguarding brand integrity through market leading data discovery and illicit image detection and security products since 1999. PixAlert's modified solutions include:

- Data Monitor Software that rapidly discovers, analyses and continuously monitors data-at-rest
- PCI Card Checker Scanner of company's systems for credit card data or image.
- Image Auditor Scanner for Illicit Images on corporate networks.
- Screen Monitor Real-time screen monitoring for inappropriate content.
- Mail Scanner Real time e-mail scanner for inappropriate content.
- GDPR Software Securely scan, identify and collate personal customer data on the network, PCs and other devices within an organisation, notifying the administrator what and where information is being retained, allowing sensitive data to be managed quickly and finally.

Macrium Reflect is a backup, disk imaging and cloning software that come with free, personal and commercial editions. Macrium Reflect is a recovery solution for home or business, used worldwide to protect documents, data and operating systems.

Using advanced disk imaging technology your entire disk contents, including operating system and data is securely saved in an easily recoverable backup file. Using this image, you can restore the entire disk, partition or individual files and folders. You can create full, differential and incremental images to optimize backup speed and disk space requirements.

RAPID7

Rapid7 transforms data into insight, empowering IT and security professionals to progress and protect their organisations. Rapid 7 solutions are powered by advanced analytics and an unmatched understanding of the attacker mindset. This makes it easy to collect data, transform it into prioritised and actionable insight, and get it to the people who can act on it—all in an instant.

Our products and services enable organisations to innovate securely and reliably, and include offerings in vulnerability management, penetration testing, application security, SIEM/incident detection and response, and log management.

YouTube Channel: <https://www.youtube.com/channel/UCnctXOUleRFu1BR5O0W5e9w>

Trustwave Vulnerability Management services deliver proactive scanning, testing and remediation of application, database and network vulnerabilities so you can better protect your customer data, financial information, intellectual property and other key assets. Through our integrated, on demand security testing platform, you can rapidly identify and address security weaknesses, thereby significantly helping to reduce threats and risk.

With cloud and managed security services, integrated technologies and a team of security experts, ethical hackers and researchers, we enable businesses to transform the way they manage their information security and compliance programs and because our vulnerability management is delivered through the cloud and our industry-leading managed security services, you can worry less about scanning and testing product complexity, resource constraints, and in-house security skills shortages—so you can focus on your core business objectives.

NetFort provides network traffic and security monitoring software for virtual and physical networks. NetFort's flagship product, LANGuardian, is unique in the marketplace thanks to its powerful deep-packet inspection technology that can be downloaded and deployed on standard physical or virtual hardware to provide comprehensive visibility in minutes.

Using its powerful network traffic analysis engine, the LANGuardian is ideal for organisations looking for more granular visibility across the network to:

- Instantly troubleshoot network performance issues and prove it is NOT the network
- Continuously monitor network security, instantly detect and resolve suspicious activity
- Monitor activity at the core or on remote sites from a single dashboard
- Always know what users are doing
- Perform forensics, go back, investigate and report
- Track inventory, who and what is on the network, servers, applications, and users

Safewhere is a software provider specialising in identity and access management (IAM) as well as Identity as a Service (IDaaS). The Safewhere Identify platform is developed for securely connecting all users to all cloud or on-premises applications while simplifying user and identity management, regardless of the size and complexity of the IT environment.

The platform includes a long list of features, such as single sign-on, multi-factor authentication, password reset, user provisioning, and centralised access control. Added together, these features help our customers boost productivity, lower IT costs, connect with partners and customers, and prepare for GDPR compliance.

Heimdal Security gives solutions to vulnerability management. It also provides ransomware protection.

Dangerous Internet traffic can be used to infect your workstations and network. This makes scanning and blocking malicious web traffic a core security component. Heimdal protects your workstations against cyber-attacks and infected servers, domains and websites, while also ensuring a safeguard against data leakage. Unique traffic-based PC protection, combined with an enterprise scale patching.

WatchGuard are a leading provider in Unified Threat Management, Next Gen Firewall and Secure Wireless solutions. Their portfolio is designed to scale to fit the needs and network capabilities of all business sizes and structures.

WatchGuard provides reliable **firewall and VPN appliances to combat today's network threats**. WatchGuard produces unified threat management solutions that provide multi-faceted protection from malicious threats, backed by strong performance with reliable multi-layered security solutions. Their line of firewall products also can provide SPAM filtering, virus filtering, Internet content filtering, and Internet monitoring. Powerful reports allow business owners and managers to track employee Internet usage and ensure that corporate IT acceptable usage policies are upheld.
